

Hassan Ahmad - Game Developer

hassanahmadofficial1@gmail.com | +923311076000 | [LinkedIn](#)

SUMMARY

3.5+ years of experience developing **high-performance products, tools, and plugins using Unreal Engine**. Proven track record in **scalable architecture, performance optimization** and **cross-functional leadership**. Passionate about mentoring teams and solving complex challenges.

SKILLS

- **Language:** C++
- **Tools & Engines:** Unreal Engine, Blueprint Visual Scripting

WORK EXPERIENCE

Unreal Engine Developer

Moshpit Studio | 10/2022 - Present

- Design, build, and maintain **efficient, reusable, and reliable** C++ code.
- Identify bottlenecks and bugs, and **devise solutions** to these problems.
- Maintain **code quality**, organization and automatization Skills.
- Consult with the web team to develop interaction that can be capable of **Unreal Engine**.

Moshpit Playable | 6/2023 - Present

- Create a connection with the web through **Web Socket**.
- Developed C++ systems to update and sync **MongoDB** with in-game actions or metadata.
- Extract **multiple information** from the web like chats and comments etc.

Gaussian Splatting | 9/2025 - Present

- Developed an Unreal Engine pipeline that converts interior and exterior scene captures into Gaussian-splat PLY assets using C++, RDG compute shaders, and GPU readback.
- Built native C++ camera planning, coverage analysis, collision and EQS validation, and automatic capture-volume fitting, migrating performance-critical Blueprint workflows to C++.
- Improved large-scene reliability and performance through incremental collision and coverage caching, streamed LODs, GPU training and cleanup, and secure export handling.

PROJECTS

PacMan | Unreal Engine Developer

- Developed a complete recreation of the **classic Pac-Man** arcade game using both C++ and Blueprint.
- Customized **the game with multiple extra features**.
- Emphasized performance and clean code structure for extensibility and reusability.
- Designed UI elements such as score counter and start/restart menus.

Eating Objects | *Unreal Engine Developer*

- Designed and developed a 3D gameplay experience where the player must eat specific objects within a time limit to progress.
- Implemented core game mechanics including object detection, timed challenges, and scoring logic using both C++ and Blueprint.
- Structured gameplay logic to be extendable and maintainable, enabling future mechanic expansions.
- Focused on core logic and backend-side mechanics rather than visuals or UI.

AI Blueprint | *Unreal Engine Developer*

- Developed an AI-powered Unreal Engine plugin that creates UMG widgets and Blueprint actors from natural-language descriptions or reference images.
- Built a two-phase generation workflow for component hierarchies and reflected property configuration, connected through WebSockets and a Gemini-powered Python server.
- Implemented C++ bridges for asset creation, component management, property setting, compilation, validation, and JSON-based error reporting.

Cinematic AI | *Unreal Engine Developer*

- Developed an AI-assisted cinematic direction toolkit for Unreal Engine that generates and edits camera-driven Level Sequences.
- Built tools for spawning and binding CineCamera actors, generating shots, lens and focus animation, camera shake, look-at tracking, sequence trimming, and quaternion interpolation.
- Integrated Editor Utility Widgets, Python automation, EQS-based camera-position testing, and cinematic rules into an agentic directing workflow.

EDUCATION

BS in EE (Computer Systems) | FAST NUCES | 2018 - 2022

- **Honors Graduate** | Final Project: Reduce Deforestation tool using ML.
